Introduction

The **Darwin-USDJPY** trading robot is specially designed and developed according to the currency USDJPY.

It works on M15, M30 and H1 timeframes and can only trade USDJPY. Only need to choose one time frame to trade. The smaller the time frame, the more orders, the more profits, but the higher risk.

It is recommended to start with 5,000 US dollars, if less than 5,000 US dollars, please use the cent account type. Cent account type means, deposit 100USD will show 10000USC in the cent account, which would be enough and the risk will become very low.

The best cents account type broker recommends FXTM and FBS.

FXTM referral link: https://www.forextime.com/?partner_id=4919801

FBS referral link: <https://fbs.com/?ppu=8518263>

Standard account type, it is recommended to choose an account type with a low spread. It is recommended to use IC Markets, because the spreads are low and the trading speed is fast, which can greatly reduce trading costs and increase profits. Installation steps

Step One: Allow DLL imports

Confirm that your MT4/MT5 platform allows expert advisor automatic trading.

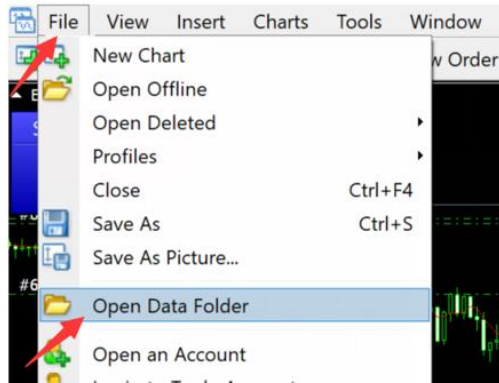

- 1, Click on “Tools” and select “Options”.
- 2, Under the “Expert Advisors” tab, you have to check “Allow automated trading” and “Allow DLL imports”. Then click on OK.

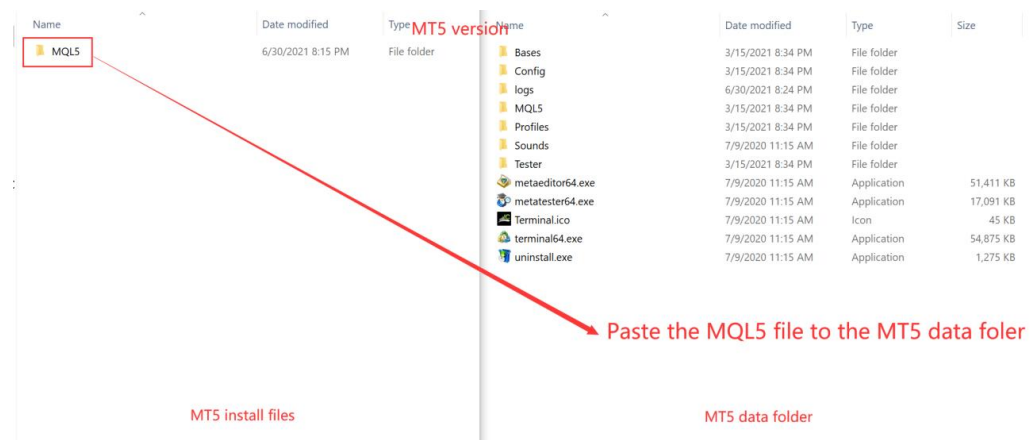

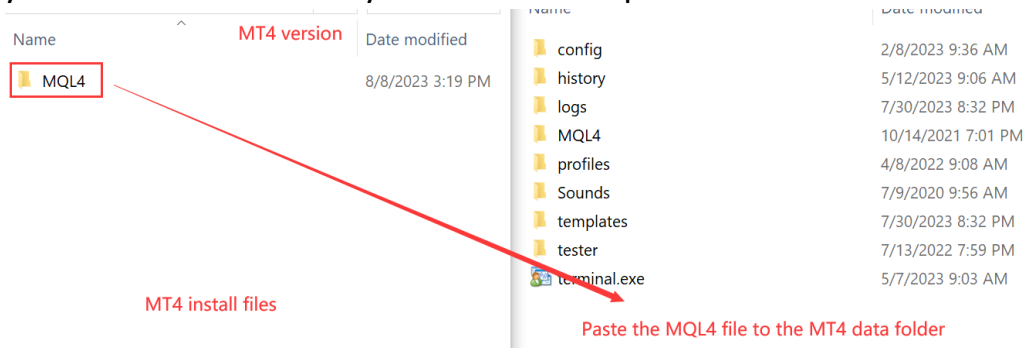

Step Two: Put the install files into the specified folder

Put the install files into the specified folder. There are slight differences depending on the MT4 or MT5 platform used.

1. Open your MT4/MT5 data folder.

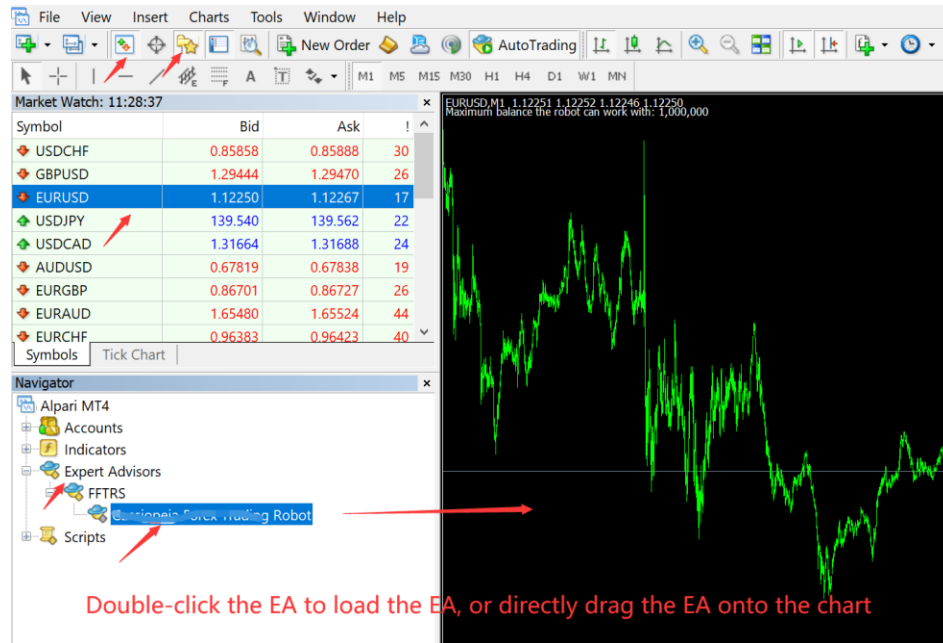

2. Copy and paste the MQL4 and templates files to your MT4 data folder if you use the MT4 platform. Copy and paste the MQL5 files to your MT5 data folder if you use the MT5 platform.

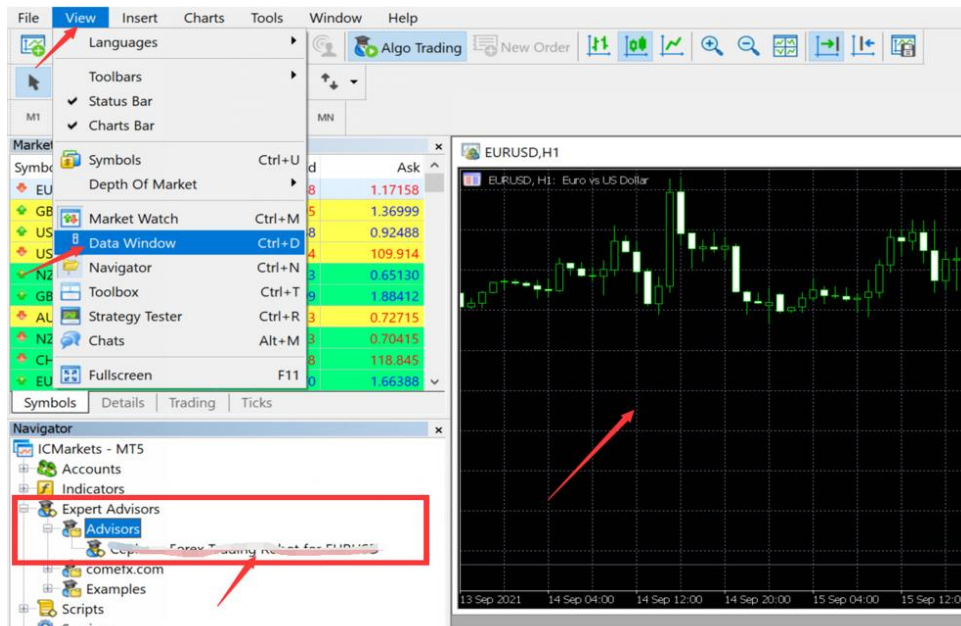

Step Three: Load the EA

Double-click the EA to load the EA, or directly drag the EA onto the chart which pairs you want to load.

MT4 platform:

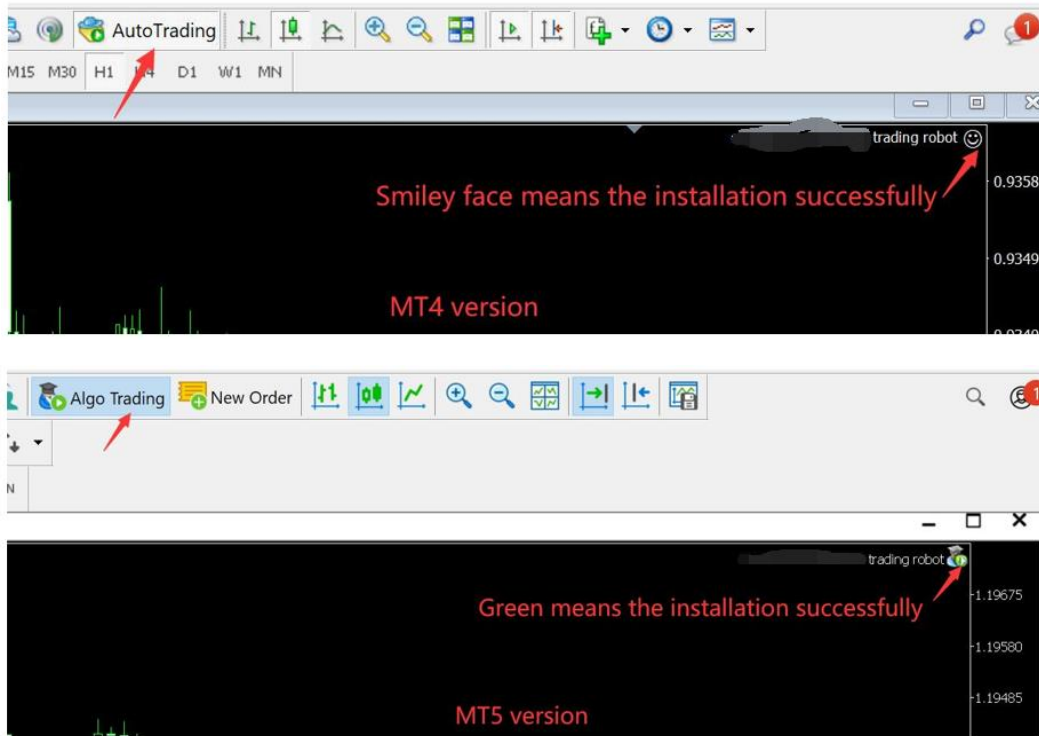

MT5 platform:

Step Four: Click AutoTrading

Click the “AutoTrading” button to allow automatic trading. If the robot is loaded successfully, there will be a smiley face in the upper right corner of the chart on the MT4 platform or green on the MT5 platform.

VPS service

The Forex Trading Robot 24/5 works, it needs your computer 24/5 running to support the robot 24/5 running. If the computer is turned off or has no internet, the robot will not work. The Forex VPS service can replace your computer to support the robot 24/7 working. You can turn off your computer at any time. We also offer a professional forex VPS service, buy link <https://www.freeforextradingrobots.com/product/vps-service-one-time-payment/>

If you need us to help you install, you can email us. Our Email: support@freeforextradingrobots.com

Remote support

After the above steps, your robot has been successfully installed. If you have doubts about your installation, you can send pictures and we will help you confirm, or we can also help you confirm remotely. We can help you check through Anydesk remotely, please do not use Team Viewer, because Team Viewer has a time limit.

Anydesk download link <https://anydesk.com/remote-desktop>
